

ReaClassical

Open Source Classical Music Editing Tools

v23.23

Release Notes

Changelog since v23.22:

- * Add album length comment to CUE file to prepare the way for creation of automated ReaClassical album report
- * Add ISRC to CUE file when present
- * CUE generation: Ensure album metadata is surrounded by quotation marks
- * Ensure that the final region doesn't include a "!" in the name if a pregap exists before it
- * CUE generation: Add CATALOG to top of CUE file if present in the album metadata @ marker
- * Create plaintext and HTML album reports when creating a CUE file
- * Use snake case for all function names
- * Add pregap lines to album reports
- * Correct calculation of final track duration when preceeded by a pregap
- * CUE and report generation: Use DDP @ album metadata if available
- * CUE and report generation: Always use saved year if available
- * CUE generation: Add REM line about ReaClassical
- * CUE generation Bugfix: Use WAVE vs WAV as file type for WAV, FLAC and WavPack
- * CUE generation: Add INDEX 00 lines if pre-gaps present in project
- * CUE generation: Beautify HTML album report
- * Generate CUE: Fix path slash match
- * Generate CUE: A few no-op code changes
- * Generate CUE: Allow for both RPP and rpp extensions (default depends on OS)

Instructions for a new install:

1. Download the latest portable install as per the installation guide (it will create a new ReaClassical folder with a short year + quarter suffix e.g. "ReaClassical_23Q4"). Run the REAPER binary inside the folder!

Instructions to update ReaClassical:

A reminder that ReaClassical versions 23.19 and onwards require SWS Extensions v2.13.2.0 from (<https://www.sws-extension.org/download/pre-release/>) for the "Whole Project View" functions to work as expected.

1. Sync ReaPack to get the latest version of the ReaClassical scripts.
2. Download the latest portable install as noted above for a new install.
3. Copy across any updated files/settings to your previous install according to the notes below:

Updated config files to be copied to your existing resource path (Options > Show REAPER resource path...):

* *reaclassical-splash.png* (found in the same location as the reaper binary)

Delete the downloaded new portable install and restart REAPER.
