*Rea*Classical

Open Source Classical Music Editing Tools

v24.3.3
(Tested on REAPER v7.09)

Release Notes

Changelog since v24.2: https://github.com/chmaha/ReaClassical/compare/24.2...main

Instructions for a new install:

1. Run the latest portable install as per the installation guide (it will create a new ReaClassical folder with a short year + quarter suffix e.g. "ReaClassical_24"). Run the REAPER binary inside the folder!

2. Sync ReaPack to get the latest version of the ReaClassical functions.

Instructions to update from ReaClassical 24.0+:

1. If Sync ReaPack to get the latest version of the ReaClassical functions.

2. For updating from a version < 24.3, run the ReaClassical_Updater function. This will offer to overwrite your toolbars and keymaps with ReaClassical portable install defaults. **DON'T do this if you have your own custom toolbars or keyboard shortcuts as they will be overwritten!**

3. Run the REAPER Update Utility (Ctrl+U) to upgrade to the latest tested version of REAPER noted above.

Basic Manual Install Inside Your Existing REAPER Install:

1. Install both ReaPack (https://reapack.com/) and latest bleeding edge SWS Extensions (https://www.sws-extension.org/download/pre-release/) if you haven't already.

2. Import my repository into ReaPack by copying and pasting this link. If you need help with importing see https://reapack.com/user-guide#import-repositories.

3. Search for "ReaClassical" and install the main ReaClassical package and any jsfx plugins (my "RCPlugs" are highly recommended for classical work).

4. Use the ReaClassical project template for relevant projects (you can set this as default in the REAPER preferences) and change to the ReaClassical theme (Options > Themes).

5. Set up keyboard shortcuts in the actions list (? shortcut) as desired.
