ReaClassical v23.20

Release Notes

Changelog:

∗ Create CD Markers: Add default 200ms marker/region offset

∗ PDF Guide: Reference 35ms crossfades in manual set-up and editing sections

∗ New: ReaClassical Preferences

∗ S-D edits: All S-D editing scripts use xfade value from RC Preferences

∗ Create CD Markers: Better CD frame snapping to account for decimal values

∗ Create CD Markers: Warning if any CD audio tracks are less than 4 seconds in length

∗ Create CD Markers: Enforce 1-second minimum for INDEX0 before a # track

∗ S-D Edit: Fix 3-point right-hand crossfading using new API

∗ S-D Edit: Further code clean-up

∗ Create CD Markers: Add space at start of project if not enough room for chosen offset

∗ Create CD Markers: Refine adding space at start of project for offset

∗ ReaClassical Preferences: Make project-based

∗ ReaClassical Preferences: Add album lead-out (postgap) as a customizable value

∗ Create CD Markers: Place metadata marker relative to =END marker

∗ S-D editing scripts: Use project extstate for S-D edit length

∗ Create CD Markers: Use project extstate for custom lengths

∗ New: Rearrange CD Tracks (left/right)

∗ Rearrange CD Tracks: Add guard clause for no selected item

∗ New themes: Sequoia Blue, Sequoia Green and Pyramix

∗ New themes: Make selected item color #ff7608

∗ New Theme: SaDiE

∗ New Function: Explode Multi-Channel Item(s)

∗ SaDiE theme: adjust colors to blend with arrange window and add black peak edges

∗ New Theme: Sonic Solutions

∗ New: Colorize (add a custom color to an item and those in the same group)

∗ Colorize: Unselect item(s) at the end of the function

∗ Colorize: Add undo block

∗ Move Track Right: Select only first item of the track before dialog appears

* Add Aux/Submix: Scroll to top of project after adding track

* Retain muted guide tracks during fade editor auditioning

* Split Whole Project View function into separate horizontal and vertical zoom functions

* Whole Project View functions: Remove superfluous undo blocks etc

* S-D Edit function: Respect existing edits contained within the source markers

* Insert with time-stretching: Respect existing edits contained within the source markers by gluing

* Insert with time-stretching: Remove superfluous functions and variables

Instructions for a new install:

1. Download the latest portable install as per the installation guide (it will create a new ReaClassical folder with a short year + quarter suffix e.g. "ReaClassical_23Q2A"). Run the REAPER binary inside the folder!

Instructions to update ReaClassical:

1. Sync ReaPack to get the latest version of the ReaClassical scripts (you can uninstall the old *mpl_Generate CUE from project markers.lua* script if ReaPack prompts you as it has been replaced with my improved version included in the ReaClassical metapackage).

2. Download the latest portable install as noted above for a new install.

3. Copy across any updated files/settings to your previous install according to the notes below:

Updated config files to be copied to your existing resource path
(Options > Show REAPER resource path. . .):
* SWS Extensions plugin (v2.13.2.0) from *UserPlugins* folder

* reaclassical-splash.png (found in the root of the portable install folder)

* Custom toolbar from *MenuSets* + contents of *Data/Toolbar_icons*

* In the Actions list (?), import the "ReaClassical" keymap from *KeyMaps*

Delete the downloaded new portable install and restart REAPER.
