ReaClassical

Open Source Classical Music Editing Tools

v24.0

Release Notes

Changelog since v23.23:

* New default ReaClassical theme for REAPER 7.x

Instructions for a new install:

1. Download the latest portable install as per the installation guide (it will create a new ReaClassical folder with a short year + quarter suffix e.g. "ReaClassical_24"). Run the REAPER binary inside the folder!

Instructions to update ReaClassical:

A reminder that ReaClassical versions 23.19 and onwards require SWS Extensions v2.13.2.0 from (https://www.sws-extension.org/download/pre-release/) for the "Whole Project View" functions to work as expected.

1. Sync ReaPack to get the latest version of the ReaClassical scripts.

2. Download the latest portable install as noted above for a new install.

3. Copy across any updated files/settings to your previous install according to the notes below:

**Updated config files to be copied to your existing resource path
(Options > Show REAPER resource path...):**

* *reaclassical-splash.png* (found in the same location as the reaper binary)

Delete the downloaded new portable install and restart REAPER.
